## About Me

I am a Full Stack Developer with 2 years of hands-on experience building scalable applications using React, Angular, FastAPI, and PostgreSQL. I also work with AI technologies, leveraging LangGraph to develop intelligent, workflow-driven systems. Additionally, I have experience with Docker, Kubernetes, and Google Cloud Platform (GCP) for scalable deployments and DevOps practices.

## Skills

- Langchain, Langgraph, crew AI
- FastAPI
- React
- Angular
- Postgress
- Docker, Kubernetes
- GCP, CICD, YAML

## Education

- Artificial Intelligence and Data Science**  
*Sri Eshwar College of Engineering* 2022 - 2026  
I am a final-year B.Tech Artificial Inteeligence & Data Science student at Sri Eshwar College of Engineering, currently holding a 76% grade with no arrears. My focus areas include Full Stack Development and Generative AI technologies.
- HSE & SSLC**  
*SS Govt Boys Higher Sec School* 2020 - 2022  
I completed my schooling at SS Govt Boys HR Sec School, Rajapalayam, securing 85.6% in Higher Secondary Education (HSE) and 82% in Secondary Education (10th grade).

## Experience

- Intern at Ezofis - AI DEVELOPER**  
AI Developer Intern at Ezofis, built workflows.
- Intern at GENWORX - FullStack Developer**  
Completed 6-month training in Angular, React, GCP, LangGraph, and CI/CD with hands-on experience.

## Projects

- Ecommerce Workflow - Langgraph**  
Designed and implemented an AI-powered Ecommerce Support Personal Assistant using LangGraph's Supervisor architecture to orchestrate multiple specialized agents, including Support, Search, Order, and Inventory agents. Implemented hybrid search (vector and keyword-based) combined with business logic filtering to ensure accurate product retrieval and validation. Leveraged core LangGraph concepts such as checkpointers and Human-in-the-Loop for state management and secure order confirmation workflows. Developed as a chatbot and integrated PostgreSQL for reliable data persistence. Incorporated Langfuse for monitoring and observability, and configured LangSmith Studio for tracing and debugging, delivering a scalable and production-ready multi-agent system.
- GroceNow - Ecomerce Backend using FastAPI**  
Developed a scalable Ecommerce backend, GroceNow, using FastAPI with a feature-based folder architecture and clean separation of admin and user modules. Implemented a secure authentication system with token rotation, token revocation, and role-based access control (RBAC). Configured production-grade middleware including Trusted Host, CORS, and structured logging. Integrated MongoDB for data management and implemented robust business logic with proper handling of cart and order edge cases. Built email notification workflows using SMTP and developed real-time in-app notifications using WebSockets. Additionally, implemented a lightweight gRPC-based recommendation service leveraging wishlist and cart data to generate personalized product suggestions.
